

Website Bio Cutout

NAME: _____

Assignment:

In this project you will use Photoshop to create a cutout similar to the one pictured to the right. This image should include one large image of yourself, as well as at least 5 other small cutouts that interact with the larger one (Your Focal Point). Focus on where the figures are facing to make the person eye travel around the canvas.

This should also have a theme that goes with your interests or hobbies you like to do. Be creative and make your work tell a story.

Another requirement is that you have at least one of the smaller figures running off the image. To achieve this you will need to size down your background to allow for transparent space in your Photoshop document. Keep in mind this transparent space will also be part of the photo, so no text on your website will be able to take up this transparent space. So keep it to a minimum if needed, or use it to your advantage. When you are done making this image you will save it as a .png. This file format supports transparency and is small in size. This makes it great for using on your website.

Grading Rubric

(28 Points Total)

Categories	Points
<p>Number of Images – 8 points (3 for large, 1 each for small) You need to have one large image and at least 5 smaller ones that fit together.</p>	
<p>Focal Point – 5 points Your Larger image should be your focal point. This image needs to be in focus and each smaller image should interact with it in a way that causes the viewer to focus back toward the larger image.</p>	
<p>Proportion – 5 points The relation of two things in size, number, amount, or degree. The main focus is on resizing objects to make sure they do not become distorted or disfigured. Your smaller objects should all be relatively the same size in relation to each other. To take a little of the focus off them you may do a slight blur effect. But not too much to where it loses focus.</p>	
<p>Image running off page – 5 points Be sure one of your smaller images runs off the page (or is off the background). This effect will then be transferred over to the webpage when you upload it as a .png.</p>	
<p>Theme – 5 points Your final image should have a theme that tells a story about your talents, interests, or hobbies.</p>	
TOTALS	

Intermediate Digital Design (IDD) STANDARDS –

IDD.1 – Students will integrate visual arts techniques as well as elements and principles of design to develop digital media.

IDD.1.1.1 – Utilize the design process to create digital media (e.g., focal point, directional flow, white and negative space)

IDD.2.2 – Create, manipulate, and appropriately use raster graphics.

IDD.2.2.1 – Identify graphic formats and their appropriate use (e.g., jpg, gif, tif, bmp, psd, png, pdf)

IDD.2.2.2 – Acquire image assets (e.g., digital camera, internet search, stock sources, scanning.)

IDD.2.3.1 – Understand that focal point is the visual element in a page that the viewer notices first.
